

MUHAMMAD UMAR IMRAN

Senior Full Stack Engineer - React / NextJs / Node.js / Ruby on Rails

Pakistan • Open to Remote (Worldwide) • umar75062@gmail.com • linkedin.com/in/umarimran

PROFESSIONAL SUMMARY

Senior full-stack engineer with 5+ years shipping production SaaS for U.S.-based clients across HR technology, project management, and CRM integration. I own features end-to-end - frontend architecture, backend services, data modeling, and cloud infrastructure, and I'm usually the one making the call on how a system should be built, not just executing a spec. Recent wins include cutting enterprise report generation from hours to seconds, retiring a costly third-party search vendor for a self-hosted replacement, and building integrations across ATS, payroll, identity, and CRM systems serving 100,000+ end users. Comfortable working directly with clients in async, remote-first teams with minimal oversight.

CORE TECHNOLOGIES

- **Languages:** TypeScript, JavaScript, SQL
- **Frontend:** React, Next.js, Relay, Redux Toolkit, Tailwind CSS, Material UI, Mantine UI
- **Backend:** Node.js, Express.js, GraphQL, Ruby on Rails, PostGraphile, Prisma ORM, REST APIs
- **Data:** PostgreSQL, Redis
- **Infrastructure:** Docker, AWS, GitHub Actions, CI/CD
- **Monitoring & Observability:** Bugsnag, New Relic, Full Story, PagerDuty
- **Testing:** RSpec, Jest, Cypress
- **Engineering:** Distributed systems, multi-tenant SaaS architecture, performance optimization, background job processing, auth/authz, system design, observability

PROFESSIONAL EXPERIENCE

Senior Full Stack Engineer - CodingCops 2021 – Present

Embedded engineer for SaaS companies, working directly with client engineering leads across three concurrent products spanning HR tech, project management, and CRM integration.

Sapling HR - Enterprise HRIS Platform | React, GraphQL, Ruby on Rails, PostgreSQL, Redis, PgSearch

- Rebuilt enterprise reporting from the ground up - replacing ORM-heavy queries with hand-tuned SQL - cutting report generation time from hours to seconds for the platform's largest tenants.
- Led the migration of search infrastructure from Algolia to PostgreSQL based pg_search, simplifying the search architecture by eliminating external index synchronization while supporting configurable full text user search.
- Built and maintained production integrations with Workable, SmartRecruiters, JazzHR, ADP Workforce Now, BambooHR, Paylocity, Azure AD, and Google OAuth, supporting 100,000+ active users across 100+ organizations.
- Drove key frontend modules through the platform's Angular-to-React modernization, including data-heavy reporting views.

SWAP PM - AI-Powered Project Management Platform | React, Relay, TypeScript, Konva

- Designed and built an interactive, canvas-based planning surface - drag-and-drop scheduling, inline editing, optimistic GraphQL updates - that stays performant on projects with 10,000+ task records.
- Owned asynchronous processing pipelines for billing automation, notifications, calendar sync, and scheduled workflows, running reliably in production without dedicated ops support.
- Integrated Stripe, Google Calendar, and Firebase for payments, scheduling, and real-time notifications.

SMB Dynamics - Zoho CRM ↔ Microsoft Outlook Integration | Node.js, BullMQ, Redis, Microsoft Graph, Zoho API

- Architected bidirectional sync between Zoho CRM and Outlook via a Microsoft Office Add-in, including retry logic, conflict resolution, and webhook-driven event processing.
- Designed the security model, encrypted OAuth token storage, Azure Key Vault integration, CSRF protection, and MFA - that was a requirement for enterprise customer sign-off.

- Built distributed worker infrastructure on BullMQ/Redis to keep contact, permission, and org-data sync near real-time under production load.
- Introduced structured logging and queue observability that let the team catch sync failures before customers reported them.

EDUCATION

- **Education:** BS.CS - University of Engineering and Technology (UET), Lahore - 2021
- Eligible to work remotely across global time zones; comfortable in async, distributed teams.

LANGUAGES

- **English** - Fluent (professional working proficiency)
- **Urdu** - Native

CERTIFICATIONS

- The Web Developer Bootcamp (Udemy)
- React - The Complete Guide - Incl. Next.js, Redux (Udemy)
- Self-directed study in distributed systems and large-scale system design, applied directly to production work on SaaS platforms
- Ongoing hands-on depth in cloud infrastructure and CI/CD practices (Docker, AWS, GitHub Actions) through production deployment work
