PROFESSIONAL SUMMARY

Senior full stack engineer with 5+ years building and shipping production B2B SaaS for international clients. I lead technical delivery across product interfaces, APIs, data and cloud services, and I'm comfortable owning a feature from architecture through release. Experience spans HR technology, project-management software and CRM integrations.

CORE TECHNOLOGIES

Languages: TypeScript, JavaScript, SQL, Ruby

Frontend: React, Next.js, Relay, Redux Toolkit, Tailwind CSS, Material UI, Mantine, Konva

Backend and data: Node.js, Express, GraphQL, PostGraphile, REST, PostgreSQL, Redis, Prisma, Ruby on Rails, pg_search

Integrations and delivery: OAuth, webhooks, Microsoft Graph, Docker, AWS, Azure, GitHub Actions, CI/CD, background jobs

Testing and operations: Jest, RSpec, New Relic, Bugsnag, PostHog, observability, multi-tenant architecture

EXPERIENCE

CodingCops | 2021-present

Senior Full Stack Engineer | Embedded with international SaaS product teams

Work directly with client engineering leads across enterprise HR software, project-management SaaS and CRM integration products. Lead a team of five engineers through code review, problem solving and delivery decisions.

- Contributed to an Angular-to-React modernization, including data-heavy reporting modules, launched in 2023.
- Own full-stack features across UI, APIs, data modeling, authentication, background processing and production operations.

SELECTED WORK

Enterprise HR platform | React, Ruby on Rails, PostgreSQL

- Rebuilt enterprise reporting data access, replacing ORM-heavy queries with targeted SQL and reducing large-tenant report generation from hours to seconds.
- Led search migration from a hosted vendor to PostgreSQL-native pg_search, reducing recurring search costs while preserving core search behavior.
- Delivered integrations across ATS, payroll and identity providers for a platform supporting 100,000+ active users across 100+ organizations.

Multi-tenant planning SaaS | React, Next.js, TypeScript, Relay, PostgreSQL

- Designed and built an interactive canvas planning surface with drag-and-drop scheduling, inline editing and optimistic GraphQL updates.
- Connected product interactions to background workflows for billing, notifications and calendar synchronization.

CRM and Microsoft 365 integration | Next.js, Node.js, BullMQ, Redis

- Architected a bidirectional CRM-Outlook sync and Office add-in, with webhook-driven processing, permission-aware mapping, retry handling and conflict resolution.
- Implemented encrypted OAuth token storage and structured queue visibility to help identify sync failures during production operation.

EDUCATION, LANGUAGES AND PROFESSIONAL DEVELOPMENT

Education: BS Computer Science, University of Engineering and Technology (UET), Lahore | 2021

Languages: English (professional working proficiency), Urdu (native)

Professional development: The Web Developer Bootcamp; React – The Complete Guide (including Next.js and Redux); ongoing study in distributed systems and system design.

Client projects are described by domain to preserve confidentiality.
